Cubical Era

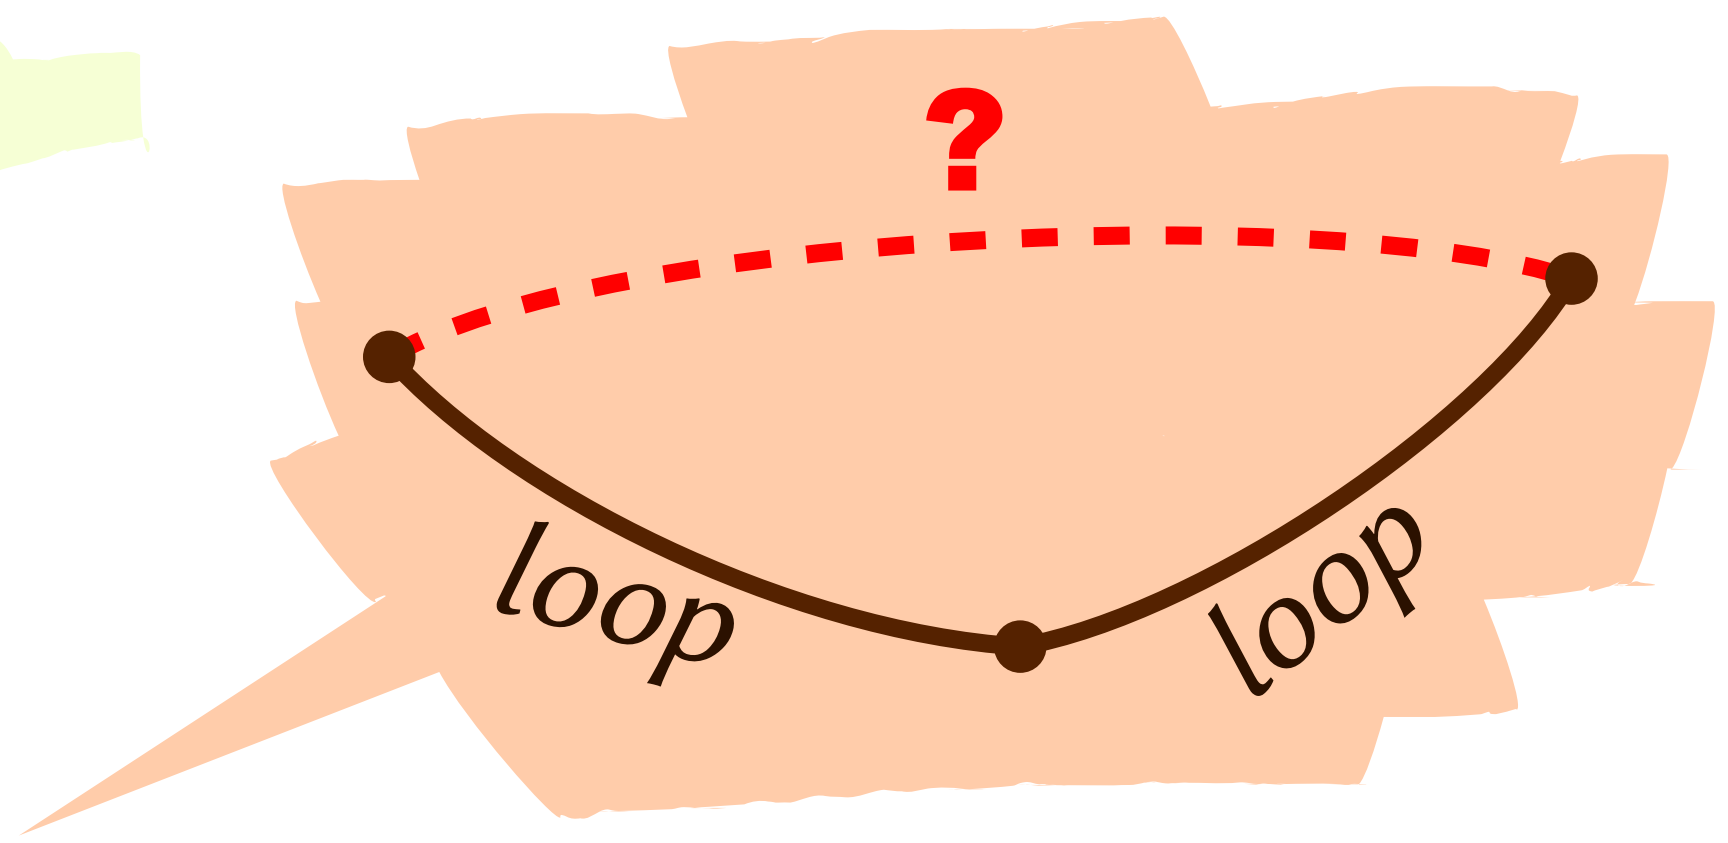

Path types

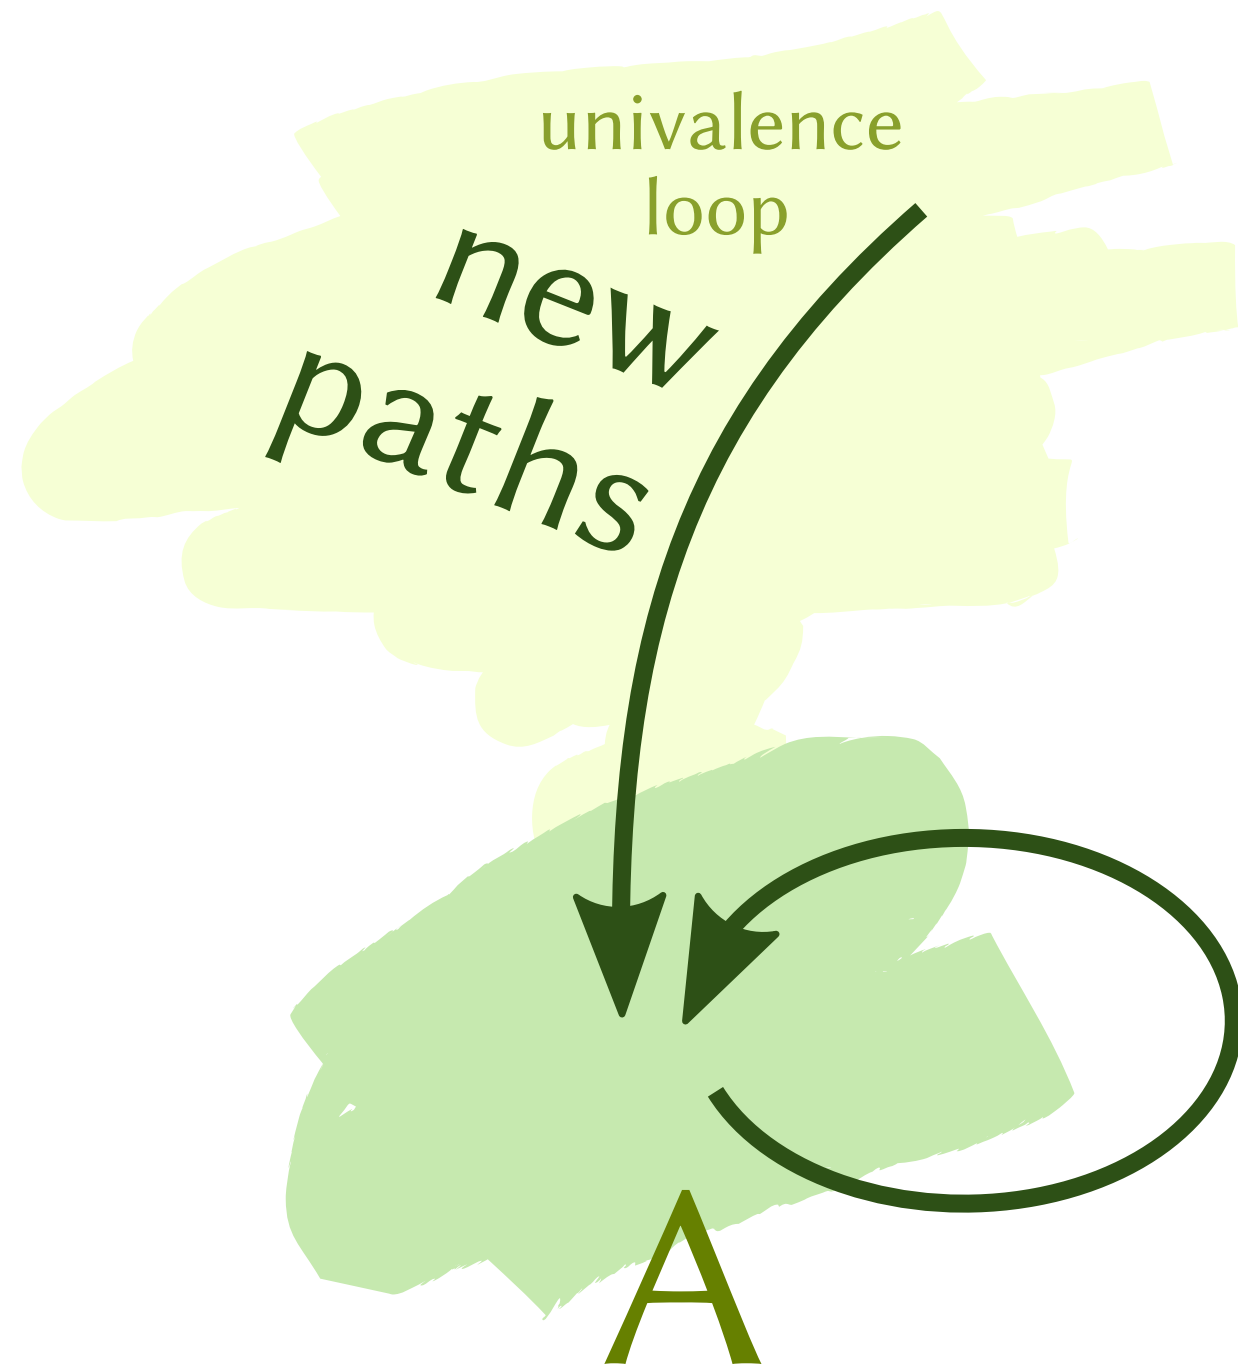

internalized $i:\mathbb{I} \vdash M : A$

Identification types

freely generated by $refl$

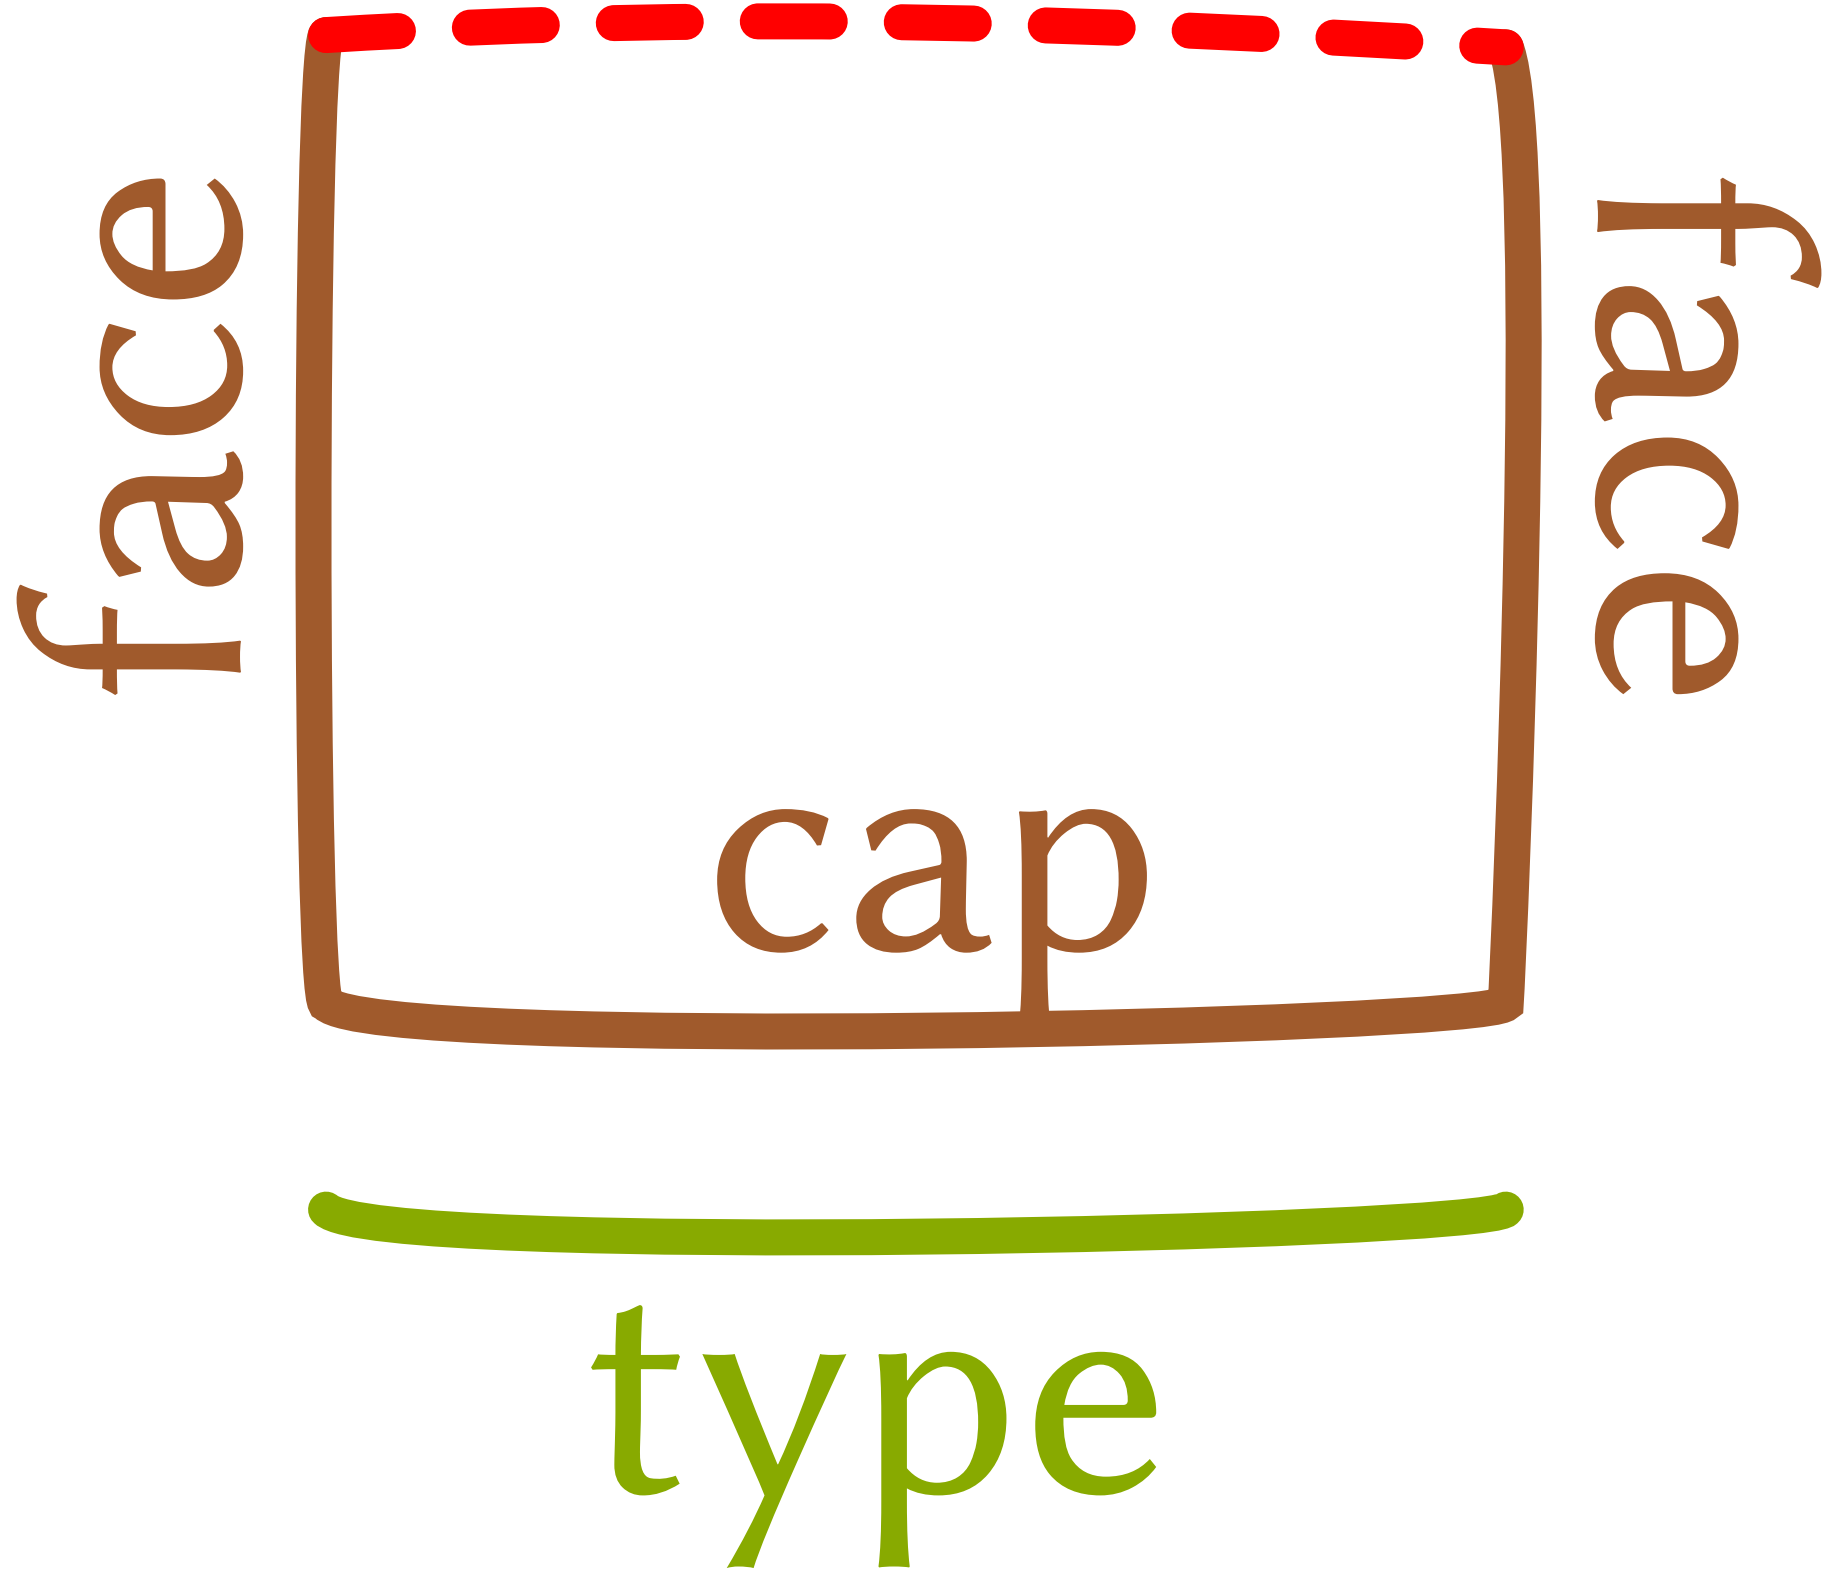

They can co-exist!

1. What is the type? (form)
2. What are the constructors? (intro)
3. How to consume an element? (elim)
4. What happens when a constructor is consumed? (β)
5. Elements generated by constructors? (η)
6. How to compose stuff? (Kan operators)

new operators
for every type
